

Business Question and Visualization Report

Date	26 July 2026
Team ID	MIRUTHALA M K
Project Name	Global AI Adoption in Education
Maximum Marks	5 Marks

Business Questions and Visualizations

Q1: What is the overall level of AI adoption in education across different countries and regions?

- **Visualization:** A geographical map showing the distribution of AI adoption across different countries and regions.
- **Insight Provided:** This visualization provides a global overview of AI adoption in education and helps identify the geographical distribution of AI usage across countries such as Australia, Brazil, Canada, China, Germany, India, Nigeria, Pakistan, the United Kingdom, and the United States.

Q2: Which countries have the highest average daily AI usage in education?

- **Visualization:** A bar chart comparing the average daily AI usage in minutes across different countries.
- **Insight Provided:** This visualization helps compare the daily AI usage patterns between countries. Canada shows the highest average daily AI usage at approximately 37.6 minutes among the countries displayed, allowing users to identify differences in AI usage intensity across countries.

Q3: How does AI usage differ between students and teachers across different countries?

- Visualization:** A grouped bar chart comparing the average AI usage percentage of students and teachers across different countries.
- Insight Provided:** This visualization helps identify the differences between student and teacher AI usage. The comparison shows that student AI usage is slightly higher than teacher AI usage in most countries, highlighting differences in AI adoption between the two major education user groups .

Q4: How has AI adoption in education changed from 2015 to 2026?

- Visualization:** A multi-line trend chart showing student AI usage, teacher AI usage, and school AI adoption from 2015 to 2026.
- Insight Provided:** The visualization demonstrates a significant increasing trend in AI adoption over time. Student AI usage increased from approximately 3.4% in 2015 to 59.3% in 2026, while school AI adoption increased from approximately 5.1% to 59.8% during the same period. This highlights the rapid growth of AI integration in education.

Q5: Which AI tools have the largest share in the education sector?

- **Visualization:** A pie chart showing the market share distribution of leading AI tools used in education, including ChatGPT, Microsoft Copilot, Khanmigo, and Google Gemini.
- **Insight Provided:** The visualization helps identify the relative popularity of leading AI tools. ChatGPT has the highest share at 27.97%, followed by Microsoft Copilot at 25.24%, Khanmigo at 23.72%, and Google Gemini at 23.07%.

Q6: How does AI usage differ between rural and urban communities?

- **Visualization:** A comparative visualization showing the growth and average AI usage of rural and urban communities.
- **Insight Provided:** The visualization highlights the difference in AI adoption between rural and urban communities. The average rural AI usage is 21.75%, while the average urban AI usage is 33.72%. This indicates that urban communities have higher average AI usage than rural communities.

Q7: What is the distribution of AI adoption levels across the analyzed records?

- **Visualization:** A bar chart showing the number of records classified into High Adoption, Moderate Adoption, and Low Adoption categories.
- **Insight Provided:** The visualization shows that Low Adoption contains the highest number of records with 453, followed by Moderate Adoption with 324 records and High Adoption with 142 records. This helps identify the overall distribution of AI adoption levels in the dataset.

Q8: How does school AI adoption vary across different regions?

- **Visualization:** A bar chart comparing school AI adoption percentages across Africa, Asia, Europe, North America, Oceania, and South America.
- **Insight Provided:** The visualization helps compare regional differences in school AI adoption. Oceania has the highest school AI adoption at 31.07%, while South America has the lowest among the displayed regions at 28.42%. This allows users to understand regional differences in AI adoption in schools.
