

Project Initialization and Planning Phase

Date	26 July 2026
Team ID	MIRUTHALA M K
Project Title	Global AI Adoption in Education
Maximum Marks	3 Marks

Project Proposal (Proposed Solution) template

This project proposal outlines a solution to address a specific problem. With a clear objective, defined scope, and a concise problem statement, the proposed solution details the approach, key features, and resource requirements, including hardware, software, and personnel.

Project Overview	
Objective	To analyze global AI adoption in education and develop an interactive Tableau dashboard that presents AI usage trends, country-level comparisons, student and teacher usage, rural and urban adoption, leading AI tools, and regional school AI adoption.
Scope	The scope includes collecting and preparing AI education adoption data, cleaning and analyzing the dataset, creating visualizations in Tableau, analyzing AI adoption from 2015 to 2026, comparing countries and regions, analyzing rural and urban AI usage, and publishing an interactive Tableau dashboard.
Problem Statement	
Description	AI adoption in education is growing across different countries and communities. However, the data related to AI usage, student and teacher adoption, rural and urban differences, AI tools, and regional adoption can be difficult to analyze when presented as raw records or separate data points. Users need a centralized visual platform to explore and compare these different aspects of AI adoption.
Impact	Addressing this problem makes global AI adoption data easier to understand and compare. An interactive dashboard can help users identify trends, understand adoption gaps, compare countries and regions, and generate meaningful insights for educational analysis and planning

Proposed Solution	
Approach	The proposed solution is a data analytics and visualization approach. The AI education adoption dataset is collected, cleaned, prepared, and analyzed using Tableau. Different visualizations are created to analyze country-level AI usage, student-teacher comparisons, AI adoption trends from 2015 to 2026, rural-urban differences, leading AI tools, adoption levels, and regional school adoption. These visualizations are combined into an interactive Tableau dashboard.
Key Features	This interactive dashboard provides a concise overview of global AI adoption through key metrics, country comparisons, adoption trends, student-teacher usage, rural-urban differences, AI tool usage, and adoption-level classification.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Local Development Engine	e.g., 2 x NVIDIA V100 GPUs
Memory	Local RAM	8 GB RAM minimum
Storage	Disk space for data, models, and logs	Max 1 GB
Software		
Frameworks	Python frameworks	Python Flask (v3 . 0 . 3)
Libraries	Additional libraries	Gunicorn (v21 . 2 . 0) for stable cloud routing execution
Development Environment	IDE, version control	VS Code (or Text Editor), macOS Terminal, Git, and GitHub UI
Data		
Data	Global AI Data	Global AI Adoption In Education(CSV format)
